Reda Kaleem

AI ENGINEER · COMPUTER VISION · APPLIED ML

Hyderabad, India +91 95508 27107 kaleemreda@gmail.com redakaleem.github.io github.com/RedaKaleem

SUMMARY

AI engineer and Computer Science graduate (CGPA 8.54) who ships working AI systems: gesture-and-voice computer control with 96% reported gesture accuracy, YOLOv8 emergency-vehicle detection trained on 1,519 annotated images, and NLP content moderation. Also brings UI/UX design experience and community leadership as a mentor and hackathon organizer.

SKILLS

AI & ML	Python, PyTorch, TensorFlow, YOLOv8, OpenCV, MediaPipe, scikit-learn, NLP, LLMs, RAG
Data	Pandas, NumPy, Matplotlib, SQL, MySQL, Tableau, EDA, feature engineering, model evaluation
Engineering	Next.js, Flask, JavaScript, REST APIs, Git, GitHub, Vercel
Automation & Design	n8n, Ollama, ElevenLabs, Figma, Canva, Adobe Express, UI/UX, responsive design

EXPERIENCE

UI/UX Designer, Double Digits May 2026 – Aug 2026

- Maison Sale: designed a responsive UI/UX framework of reusable layouts, components and breakpoints.
- Qafila: owned the visual brand for local clothing labels, producing high-end product imagery.
- Managed back-end image assets so every product visual was correctly placed and displayed.

Project Developer & Mentor, Lords Skill Academy Aug 2025 – Nov 2025

- Designed and built Python projects with OpenCV and Pygame used as hands-on teaching material.
- Mentored students from idea to working build and supported programme research and scheduling.

Data Science & ML Intern, Pantech E-Learning Sep 2024

- Compared ML classifiers for sound-wave fire suppression and documented results in a 46-page report.

PROJECTS

AuraOS, Multimodal AI Operating Layer | Python, OpenCV, MediaPipe, Whisper, LLMs GitHub

- Architected a 55-module Python system for controlling a computer by hand gesture and voice, with intent detection, planning and safety checks before OS automation.
- Recorded a balanced 4,744-sample dataset across 8 gesture classes; the gesture model reports 96% accuracy.

ClearPath AI, Emergency-Vehicle Signal Priority | YOLOv8, OpenCV, Python GitHub

- Trained YOLOv8 (50 epochs, 640 px) on a custom 1,519-image ambulance dataset and built a real-time loop across 4 junction feeds that opens a temporary green corridor, then restores normal timing.

Sael (KAR), Voice-First AI Headset Assistant | Python, Speech Recognition, Ollama, ElevenLabs GitHub

- Built a hands-free accessibility assistant with speech-to-text, command routing, a local LLM and spoken replies, plus tone routing across 5 mood states.

Also built: Virtual Steering (webcam gesture game controller), Women's Safety Insights (Twitter sentiment analysis) and the WSC Healthcare enterprise website.

EDUCATION

B.E. Computer Science Engineering, Lords Institute of Engineering and Technology, Hyderabad CGPA 8.54

Intermediate, MS Junior College CGPA 9.6

RESEARCH, LEADERSHIP & CERTIFICATIONS

- **Research:** co-authored paper on ML-based content moderation; YOLOv8 emergency-vehicle seminar (22 pp.); forest fire prediction report (46 pp.).
- **Leadership:** Lead, CodeWave Hub student tech community; organizer, HackPrix hackathon; mentor, CodeDay Hyderabad.
- **Certifications:** IBM SkillsBuild AI Fundamentals and Data Fundamentals; Postman Student Expert.
